DETAILED ACTION

1. Claims 2,5,7,10,12,15,17, and 20 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per claim 2, the recitations on lines 4-20 appears misdescriptive since they contradict to those disclosed in the specification and in figure 3. Claims 5,7,10,12,15,17, and 20 also have the same problem.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1,3,4,6,8,9,11,13,14,16,18 and 19 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Masumoto (4,638,058).

Masumoto discloses in figure 1 a round off mechanism having an incrementer selectively incrementing an operand at a most significant discard bit position to generate an incremented rounding result (see col. 3, lines 7-13), control logic (18) causing the round off mechanism to selectively produce a rounded result equal to either a remainder of the operand (when signal 20 = 1), or a remainder of said incremented rounding result (when signal 20

equal 1) after truncation. The round off mechanism clearly avoids offset within the rounded result as claimed.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
